

ANTIBODIES DIRECTED TO PDGFD AND USES THEREOF

ABSTRACT

5 The present invention is related to antibodies directed to the antigen PDGFD and
uses of such antibodies. In particular, in accordance with the present invention, there are
provided fully human monoclonal antibodies directed to the antigen PDGFD. Nucleotide
sequences encoding, and amino acid sequences comprising, heavy and light chain
immunoglobulin molecules, particularly sequences corresponding to contiguous heavy
and light chain sequences spanning the framework regions and/or complementarity
10 determining regions (CDR's), specifically from FR1 through FR4 or CDR1 through
CDR3, are provided. Hybridomas or other cell lines expressing such immunoglobulin
molecules and monoclonal antibodies are also provided.
